

### REMARKS

Claims 1-30 remain in the application. Claim 14 has been amended.

The drawings stand objected to under 37 C.F.R. §1.83(a) on the basis the term “latch means” recited in claim 16 and the terms “compression spring”, “stop member”, and “cam track” are not shown in the drawings. Responsive thereto, Fig. 2 has been amended to add the compression spring and reference the compression spring with numeral 50 and reference the latch means, the cam track, and the stop member with numerals 56, 52, and 54, respectively. Moreover, the specification has been amended to recite the numeral 50 with the compression spring as well as a latch means 56 comprising a cam track 52 and a stop member 54. No new matter has been entered because the “compression spring” was disclosed in the specification and the “latch means”, “stop member”, and “cam track” are shown in Fig. 2 as originally filed and have merely been provided with reference numerals.

Applicant submits herewith formal drawings in the form of drawing replacement sheets 1 and 2. In addition, Applicant submits herewith a marked copy of Fig. 2 showing the additional numerals. Applicant accordingly respectfully requests the Examiner review and approve the new formal drawings including the amendments made to Fig. 2.

The specification stands objected to on the basis the limitation recited in claim 18 is not disclosed in the specification. Applicant respectfully directs the Examiner’s attention to page 6, first full paragraph, which discloses that the stem length may be varied by application of less than around 5 lbs of force. Applicant accordingly respectfully submits the specification does recite the limitation of claim 18. Applicant therefore respectfully requests the withdrawal of the outstanding objection to the specification.
